

The L-39 Albatross Jet Trainer

The L-39 was born in Czechoslovakia and made its international debut at the 1977 Paris Air Show. It is extremely agile and provides a spectacular view from both cockpits.

European air forces and generations of Russian cosmonauts have prepared for space in the incredible L-39 Albatross.

Jet fighters like the L-39 are used to help prepare space travelers for the high-g forces of a space launch. NASA uses another jet trainer, the supersonic T-38, to train American astronauts for space.

The L-39 features an air-conditioned pressurized cabin and tandem seating.

General Information

The Aurora Aerospace flight center is conveniently located at St. Petersburg/Clearwater (PIE) International Airport in Florida. The airport is a short drive away from Tampa International Airport (TPA), and less than two hours away by car from Orlando (ORL).

Choose from a variety of flight and space training packages. Receive an informative introduction to orbital and suborbital physics and the physiologic aspects of space travel. Learn about adapting to high "g" and "zero gravity" environments.

Aurora Aerospace Chief Pilot and Chief Medical Officer Howard Chipman has 30+ years of flying experience. He is an FAA Certified Flight Instructor with Commercial, Multi-Engine, Glider, Instrument and L-39 Jet Ratings, and has completed a variety of space flight training at the famed Yuri Gagarin Cosmonaut Training Center in Russia. Chip is also a Board-Certified Emergency Physician.

The Adventures

Introductory Flight Training:

L-39 Flight	\$3000+
Zero-G Flight	\$2500
L-39 Simulator & MAD.	\$1500

Complete Space Training: \$8000

Includes:
L-39 Flight, Zero-G Flight, Hypoxia Training, Flight Simulator, and Multi-Axis Disorientation Machine.

Zero-Gravity Training for Space

Experience the incredible sensation of floating in space!

Train in simulated "zero-g" by flying a series of parabolic flight maneuvers in the Rockwell Commander 700 that counter the forces of gravity.

Each of the parabolic maneuvers last approximately 10 seconds in the Aurora Aerospace training aircraft. Expect to perform 10-12 weightless maneuvers.

You decide when to fly. You pick the launch date. As long as the weather is favorable and the pilot is available, you can experience the weightlessness of space on your terms.

L-39 Space Flight Training

Fly this exciting and responsive jet under the close supervision of our space flight instructors. You will experience the type of sustained g-forces and weightlessness one would undergo during a suborbital flight. Basic aerobatics are part of this "top gun" fighter jet flight.

Complete a single introductory flight or enroll in advanced space flight training.

ADVANCE RESERVATIONS
